Northern Star Resources | Forecast-period NAV

ASX: NST | Financial base date: 30 Jun 2026 | Market references: 9 Nov 2026 | A$ millions unless stated

Asset NAV / EV	**A$19.93bn**
Equity NAV	**A$19.77bn**
Forecast-period NAV / share	**A$13.89**
Market price / partial NAV	**1.86x**

A$13.89/share is the value of the explicit FY27-FY36 forecast period only. It must not be described as a complete NAV or treated as a target price.

METHOD & VALUATION READ-THROUGH

Finite-horizon, discounted asset cash-flow NAV for existing operations plus a separate Hemi scenario. The 8.0% nominal AUD discount rate is an analyst judgement; the base case assigns zero residual value beyond FY36. The result is explicitly a partial NAV, not a full reserve-life NAV or fair value. The market reference price is A$25.85 on 9 Nov 2026.

KEY DATA & MODEL DRIVERS

- FY27 guidance midpoints: 1,575koz gold sold; A$3,250/oz AISC; A$882.5m sustaining capital; A$1.86bn total growth capital including Hemi; A$240m exploration.

- The model splits FY27 growth capital into A$1.635bn ex-Hemi plus A$225m Hemi capex; total equals the A$1.86bn midpoint and avoids double-counting Hemi.

- At 9 Nov spot references: gold US$4,139.84/oz and AUD/USD 0.68942, equivalent to about A$6,005/oz. Spot is held flat in nominal terms in the scenario.

- Hemi is modelled from first gold in FY31, reaching 530koz plateau; total Hemi development capex of A$2.225bn and AISC/D&A; assumptions remain placeholders.

WHAT IS NOT YET PROVEN / MODEL LIMITATIONS

- Existing operations forecast 16.475Moz FY27-FY36 versus approximately 22.911Moz existing-operations reserves at 31 Mar 2026; about 6.436Moz remains outside the explicit forecast.

- Hemi forecast production totals 2.850Moz FY31-FY36 versus 5.508Moz reserves; about 2.658Moz remains beyond FY36. Neither reserve tail is valued.

- FY27 ex-Hemi growth and sustaining capex use Q1 guidance midpoints; FY28-FY36 production, costs, capex and Hemi timing are analyst scenarios, not company guidance.

- No cross-asset royalty overlay is applied: Pogo is in Alaska; site-level royalties, taxes, closure costs and mine-by-mine reserve schedules require a separate build. The 8% discount rate has a CAPM cross-check near 12.0%, but that is not used as the asset discount rate.
